Directory source · Active Directory · LDAPS

Configure a read-only source and preview identity matching before apply.

https://docs.qintoravacloud.com/integrations/directory-source/active_directory/

Connection and scope

Use a dedicated read-only bind account. Secret JSON: bindDn, password; optional ca PEM. Only ldaps:// on 636 or 3269 with certificate verification is accepted. For private AD, establish a VPC/VPN route and explicitly allow its CIDRs. objectGUID is converted from AD byte order to a stable UUID.

Transport

`ldap`

External ID

`objectGUID`

Default coalescing path

`mail`

Provider fields

Key	Label	Example
baseDn	Search base DN	DC=example,DC=com
filter	LDAP user filter	(&(objectCategory=person)(objectClass=user))
privateCidrs	Approved private network CIDRs	10.20.0.0/16
caAlias	Optional private CA credential alias	directory-ca

Default mapping

Source	Target	Transform
givenName	firstName	text
sn	lastName	text
mail	email	lower
sAMAccountName	username	lower
employeeID	employeeNumber	text
objectGUID	ldapCorrelationId	text

Verify and troubleshoot

Preview, apply, and diagnose a directory import. Verify the immutable key, existing-account match, complete pagination and disable thresholds before applying.
