Directory source · Microsoft Entra ID

Configure a read-only source and preview identity matching before apply.

https://docs.qintoravacloud.com/integrations/directory-source/entra/

Connection and scope

App-only Microsoft Graph User.Read.All with admin consent. Secret JSON: clientId, clientSecret; or accessToken. Tenant ID selects the Microsoft token endpoint. Only the public Microsoft Graph origin is used. The complete user collection is paged; missing users are never treated as deletions.

Transport

`graph`

External ID

`id`

Default coalescing path

`userPrincipalName`

Provider fields

Key	Label	Example
`tenantId`	Directory tenant ID	`Tenant UUID`

Default mapping

Source	Target	Transform
`givenName`	`firstName`	`text`
`surname`	`lastName`	`text`
`userPrincipalName`	`email`	`lower`
`userPrincipalName`	`username`	`lower`
`employeeId`	`employeeNumber`	`text`
`id`	`ldapCorrelationId`	`text`
`jobTitle`	`title`	`text`

Verify and troubleshoot

Preview, apply, and diagnose a directory import. Verify the immutable key, existing-account match, complete pagination and disable thresholds before applying.
