Directory source · Google Workspace Directory

Configure a read-only source and preview identity matching before apply.

https://docs.qintoravacloud.com/integrations/directory-source/google_workspace/

Connection and scope

Enable Admin SDK and authorize admin.directory.user.readonly through domain-wide delegation. Secret JSON is the dedicated service account key (client_email/private_key); subject must be a delegated administrator. Alternatively supply a short-lived accessToken. No write directory scope is requested.

Transport

`google`

External ID

`id`

Default coalescing path

`primaryEmail`

Provider fields

Key	Label	Example
customer	Workspace customer ID	my_customer
subject	Delegated administrator email	directory-reader@example.com

Default mapping

Source	Target	Transform
name.givenName	firstName	text
name.familyName	lastName	text
primaryEmail	email	lower
primaryEmail	username	lower
id	ldapCorrelationId	text

Verify and troubleshoot

Preview, apply, and diagnose a directory import. Verify the immutable key, existing-account match, complete pagination and disable thresholds before applying.
