Directory source · Other LDAP directory · LDAPS

Configure a read-only source and preview identity matching before apply.

https://docs.qintoravacloud.com/integrations/directory-source/ldap/

Connection and scope

Use entryUUID or another immutable identifier. Secret JSON: bindDn, password; optional ca. A TLS-valid read-only directory and reachable approved network route are required.

Transport

`ldap`

External ID

`entryUUID`

Default coalescing path

`mail`

Provider fields

Key	Label	Example
`baseDn`	Search base DN	`ou=people,dc=example,dc=com`
`filter`	LDAP user filter	`(objectClass=inetOrgPerson)`
`privateCidrs`	Approved private network CIDRs	`10.20.0.0/16`
`caAlias`	Optional private CA credential alias	`directory-ca`

Default mapping

Source	Target	Transform
`givenName`	`firstName`	`text`
`sn`	`lastName`	`text`
`mail`	`email`	`lower`
`uid`	`username`	`lower`
`entryUUID`	`ldapCorrelationId`	`text`

Verify and troubleshoot

Preview, apply, and diagnose a directory import. Verify the immutable key, existing-account match, complete pagination and disable thresholds before applying.
