Directory source · Okta Workforce Identity

Configure a read-only source and preview identity matching before apply.

https://docs.qintoravacloud.com/integrations/directory-source/okta/

Connection and scope

Read /api/v1/users with scoped OAuth okta.users.read (recommended) or a least-privileged SSWS token. Secret JSON: accessToken, or token with authScheme ssws. Link-header pagination is followed on the same origin. Suspended/deprovisioned states are imported only if Active is mapped and disabling is explicitly permitted.

Transport

`okta`

External ID

`id`

Default coalescing path

`profile.email`

Provider fields

Key	Label	Example
path	Users collection path and filter	`/api/v1/users?limit=200`

Default mapping

Source	Target	Transform
`profile.firstName`	`firstName`	`text`
`profile.lastName`	`lastName`	`text`
`profile.email`	`email`	`lower`
`profile.login`	`username`	`lower`
`profile.employeeNumber`	`employeeNumber`	`text`
`id`	`ldapCorrelationId`	`text`

Verify and troubleshoot

Preview, apply, and diagnose a directory import. Verify the immutable key, existing-account match, complete pagination and disable thresholds before applying.
