Directory source · SCIM 2.0 directory

Configure a read-only source and preview identity matching before apply.

https://docs.qintoravacloud.com/integrations/directory-source/scim/

Connection and scope

Use a read-only SCIM Users endpoint and bearer credential. Secret JSON: accessToken or token. startIndex/count pagination requires a consistent totalResults; incomplete or looping results block the import.

Transport

`scim`

External ID

`id`

Default coalescing path

`emails.0.value`

Provider fields

Key	Label	Example
path	Users collection path	/scim/v2/Users

Default mapping

Source	Target	Transform
name.givenName	firstName	text
name.familyName	lastName	text
emails.0.value	email	lower
userName	username	lower
id	ldapCorrelationId	text

Verify and troubleshoot

Preview, apply, and diagnose a directory import. Verify the immutable key, existing-account match, complete pagination and disable thresholds before applying.
