Discovery provider · Alibaba Cloud

Discover accounts and regional resources using RAM role delegation.

https://docs.qintoravacloud.com/integrations/discovery-provider/alibaba_cloud/

Prerequisites

- RAM role trusted for Qintorava discovery
- Read-only policies for target services
- Resource Directory access for multi-account discovery

Configuration steps

1. Create the cross-account RAM role
2. Attach resource read policies
3. Select accounts and regions
4. Validate role assumption

Provider fields

Field	Type	Requirement and options
Resource Directory ID `resourceDirectoryId`	text	Optional
Account IDs `accountIds`	tag_list	Required
RAM role ARN `roleArn`	text	Required
External ID `externalId`	text	Optional
Access-key secret alias `accessKeySecretAlias`	text	Optional
Regions `regions`	tag_list	Required
Resource types `resourceTypes`	tag_list	Optional

Verify and troubleshoot

Test with the narrowest supported non-production scope. Confirm that the connection test reaches the expected provider and that the preview or receipt matches the intended scope. Check identity, credential references, network access and provider permissions before retrying. Record the failure stage and redact sensitive payloads when escalating.
