Discovery provider · Microsoft Azure

Discover Azure tenants, management groups, subscriptions, and resources through Resource Graph.

https://docs.qintoravacloud.com/integrations/discovery-provider/azure/

Prerequisites

- Microsoft Entra application or workload identity
- Reader and Resource Graph access
- Tenant administrator consent

Configuration steps

1. Register the discovery identity
2. Assign Reader at the target scope
3. Configure federation or a secret alias
4. Validate Resource Graph access

Provider fields

Field	Type	Requirement and options
Tenant ID `tenantId`	text	Required
Application / client ID `clientId`	text	Required
Management group IDs `managementGroupIds`	tag_list	Optional
Subscription IDs `subscriptionIds`	tag_list	Required
Authority host `authorityHost`	url	Optional
Regions `regions`	tag_list	Optional
Resource types `resourceTypes`	tag_list	Optional

Field	Type	Requirement and options
Federated credential name `federatedCredential`	text	Optional

Verify and troubleshoot

Test with the narrowest supported non-production scope. Confirm that the connection test reaches the expected provider and that the preview or receipt matches the intended scope. Check identity, credential references, network access and provider permissions before retrying. Record the failure stage and redact sensitive payloads when escalating.
