Discovery provider · IBM Cloud

Discover IBM Cloud resource groups, regions, and service instances.

https://docs.qintoravacloud.com/integrations/discovery-provider/ibm_cloud/

Prerequisites

- IBM Cloud service ID or trusted profile
- Viewer access for target resource groups
- API key secret alias when federation is unavailable

Configuration steps

1. Create a service ID or trusted profile
2. Assign Viewer and service reader roles
3. Select resource groups and regions
4. Validate Global Search API access

Provider fields

Field	Type	Requirement and options
IBM Cloud account ID `accountId`	text	Required
Trusted profile ID `trustedProfileId`	text	Optional
API-key secret alias `apiKeySecretAlias`	text	Optional
Resource group IDs `resourceGroupIds`	tag_list	Required
Regions `regions`	tag_list	Optional
Services `services`	tag_list	Optional

Verify and troubleshoot

Test with the narrowest supported non-production scope. Confirm that the connection test reaches the expected provider and that the preview or receipt matches the intended scope. Check identity, credential references, network access and provider permissions before retrying. Record the failure stage and redact sensitive payloads when escalating.
