Discovery provider · Oracle Cloud Infrastructure

Discover OCI compartments and resources through signed API requests.

https://docs.qintoravacloud.com/integrations/discovery-provider/oracle_cloud/

Prerequisites

- OCI tenancy and user OCIDs
- Discovery policy with inspect/read access
- API signing key in Secret Manager

Configuration steps

1. Create the discovery user or dynamic group
2. Add read policies for selected compartments
3. Reference the signing-key secret alias
4. Validate regions and compartment access

Provider fields

Field	Type	Requirement and options
Tenancy OCID `tenancyOcid`	text	Required
User OCID `userOcid`	text	Required
API key fingerprint `fingerprint`	text	Required
Private-key secret alias `privateKeySecretAlias`	text	Required
Compartment OCIDs `compartmentOcids`	tag_list	Required
Subscribed regions `regions`	tag_list	Optional
Resource types `resourceTypes`	tag_list	Optional

Verify and troubleshoot

Test with the narrowest supported non-production scope. Confirm that the connection test reaches the expected provider and that the preview or receipt matches the intended scope. Check identity, credential references, network access and provider permissions before retrying. Record the failure stage and redact sensitive payloads when escalating.
