Knowledge source · Notion

Index pages and databases shared with a Notion integration.

https://docs.qintoravacloud.com/integrations/knowledge-source/notion/

Prerequisites

- Notion integration
- Pages shared with the integration
- Secret Manager token alias

Configuration steps

1. Enter integration identity
2. Select databases and root pages
3. Validate page and child-block access

Provider fields

Field	Type	Requirement and options
Workspace ID `workspaceId`	text	Optional
Integration ID `integrationId`	text	Required
Database IDs `databaseIds`	tag_list	Optional
Root page IDs `rootPageIds`	tag_list	Required
Index child pages `includeChildPages`	boolean	Optional
Index linked files `includeFiles`	boolean	Optional

Verify and troubleshoot

Test with the narrowest supported non-production scope. Confirm that the connection test reaches the expected provider and that the preview or receipt matches the intended scope. Check identity,

credential references, network access and provider permissions before retrying. Record the failure stage and redact sensitive payloads when escalating.
